M6 (Ex. 2) Determination of the acceleration due to gravity using simple pendulum.
E11 (Ex. 9) Measurement of the electrochemical equivalent of copper and the Faraday constant.
O6 (Ex. 17) Measurement of the radius of curvature of a lens by the method of Newton’s rings.
O2 (Ex. 15) Determination of the refractive index of glass.
C4 (Ex. 8) Determination of the ratio of the specific heats $\kappa = \frac{C_p}{C_v}$ of air.
C3 (Ex. 7) Determination of the specific latent heat of vaporization of water.
M10 (Ex. 5) Measurement of the velocity of a sound in air.

Instructions of experiments can be founded in a book
M. ZUBEK, “EXPERIMENTS IN PHYSICS”, Wydawnictwo PG, 2005

or in the website
